Instruction for Installation & Version Update

1. How to install the script in online?

Answer: Please follow the following procedure to install this script in online server:

1. Upload the **zip** file downloaded from CodeCanyon to your server in the public_html or, any other directory you intend the script to run.
2. Extract the **zip** file in that directory.
3. Create a **new database** from your server **MySQL** with **PhpMyAdmin**.
4. Create **db user** to the database and link that database to the **db user**.
5. Go to the URL of the unzipped folder.
6. Make sure the required files are permitted **writeable** in the folder you put them and all the requirements are fulfilled by the server environment.
7. Fill up these Installation form with your **database hostname**, **database username**, **database**
8. **password** and **database name** respectively which you have created in the previous step.
9. Provide your default admin credentials in the form.
10. Click on "**Install Matrimonial**" and wait for the installation to complete.
11. Links to "**Activation Form**", admin panel and the frontend of the site will appear. First, activate the license for your online domain and then browse in it.

2. How to install the script manually?

Answer: Please follow the following procedure to install this script in local:

1. **Create** a new folder in your htdocs/www folder.
2. **Extract** the downloaded script in that folder which you have just created.
3. Go to **PhpMyAdmin** and create a new database & import the uploadable_database.sql file from the extracted files.
4. Open the application->config->**database.php** file and change the below values with your data:
   'hostname' => 'localhost',
   'username' => 'phpmyadmin username', //default is root
   'password' => 'phpmyadmin password', // default password is blank for xampp
   'database' => 'database name',
   Save your file.

Finally browse the script.

3. How to update the version from 1.7 to 1.8?

Answer: This update will be workable if the installed version is 1.7

1. Log in to your cPanel. Open File Manager.
2. Open the folder where your running script is located.
3. Upload the application.zip file from updates/1.7 to 1.8/application.zip which is downloaded from CodeCanyon to your server where your script is running.
4. Extract the zip file in the root directory of the running script. (Example: if your script is located in the public_html/matrimonial in the server. Then, public_html/matrimonial is the root directory.)
5. Import the .sql file which is provided in the updates/1.7 to 1.8/ folder

That's it!
